Private IoT Network Heavy Industries

Private IoT Network

The Private IoT Network of MobileTrack Heavy Industries is changing the possibilities to collect data and signals from almost anything.

With many types of IoT **wireless**, long lasting and compact sensors you can monitor and collect data from every device, machine, equipment etc.

The Mobile Universal Gateway (MUG) IoT system collects and processes the data so that the right people, on the right time, on the right location will receive the right information.

The Private IoT Network will give you the power to get every and all the right information to maximize your production and safety while reducing the maintenance cost of your on and offshore operations.

Futureproof Private IoT Network

MUG IoT data intelligence

Many types of IoT sensors

Integration of legacy systems

Emergency callcenters

Global deployment

Total support and services

Mobile
